

MICHIGAN
CHAMBER
of Commerce

November 27, 2012

The Honorable Ken Horn
State Representative and
Chairman of the House Energy and Technology Committee
124 North Capitol Ave.
Lansing, MI 48933

Dear Chairman Horn and Members of the House Energy and Technology Committee,

The Michigan Chamber of Commerce supports Senate Bill 1291; its common sense reforms will help move Michigan forward by modernizing laws governing providers of home and business security monitoring systems and services. It is critical our laws and regulations keep pace with new technology so that we remain a competitive state.

Every day, businesses are rolling out new products that allow people to connect with each other, and use wireless Internet to connect and control their homes and small businesses from anywhere in the world. These new technologies offer consumers and business owner's cost effective options for security, communications, and much more.

Senate Bill 1291 will modernize our laws by streamlining a statewide process and setting statewide standards for a qualifying entity to become a provider of wireless Internet security. We urge you to support Senate Bill 1291 and its common sense reforms.

Thank you.

Sincerely,

A handwritten signature in black ink, appearing to read "Jason Geer".
